

Hello, I am a T-Mobile customer and have been for a very long time. Although I am very satisfied with the service, I feel that it could be better. Usually I have excellent service; however, occasionally I will lose my service indoors. Unlike what I've been hearing is the consensus online, I am greatly looking forward to T-Mobiles acquisition for several reasons:

- Many of these problem areas in which I lose my service will be resolved with both companies' cell towers supporting me.
- T-Mobile (to my knowledge) has not begun construction towards a faster LTE network, as I am in the market for a smartphone, having access to only a few megabits per second is a disappointing inevitability.
- Many AT+T customers often complain about their service, especially in bigger cities, and this acquisition will help alleviate the bandwidth pressure, allowing for less dropped calls and faster speeds, and hopefully, a true unlimited plan (no throttling or extra fees)
- T-Mobile may currently be the cheapest plan provider, however, for many, a few extra dollars for better and more reliable service is a happy expenditure.
- With these two companies not having to improve their service as significantly within urban areas due to their combined cell towers, they could expand more to rural areas.
- With this acquisition, the iPhone will now also become an option for me to purchase. I'm a fan of the android OS; however, more competition can't hurt.
- Although this means there will be one less carrier to compete with, it also means 1 less carrier that phone manufacturers have to build for, which may bring down prices; however it may also alleviate some pressure for AT+T and Verizon to subsidize their phones.
  - With Sprint still competing as a cheaper carrier, I don't think AT+T or Verizon could get too out of hand with their prices.

As long as regulations are put into place so that they can keep their prices in the best interests of the consumers, I think this acquisition would be very beneficial to the over 100 million combined users of AT+T and T-Mobile. Thanks for hearing my thoughts on the matter, it is much appreciated.
